CANDLE

1. CANDLE

1.1

CANDLE is a multinational, multi-centre, observational study of children with inflammatory bowel disease (IBD) and their families. The study aims to investigate the genetic, environmental and clinical factors that influence the development and course of IBD. Data will be collected from children and their families across Europe, North America, and Asia. The study will focus on the following areas:

1.2

CANDLE will include children aged 60 months and older who have been diagnosed with IBD by a specialist clinician.

1.3

Children who are currently receiving treatment for IBD will be included in the study. Children who have been diagnosed with IBD but are not currently receiving treatment will also be included. Children who have been diagnosed with IBD but are not currently receiving treatment will also be included. Children who have been diagnosed with IBD but are not currently receiving treatment will also be included.

1.4

1.5

1.6

Children who are currently receiving treatment for IBD will be included in the study. Children who have been diagnosed with IBD but are not currently receiving treatment will also be included. Children who have been diagnosed with IBD but are not currently receiving treatment will also be included. Children who have been diagnosed with IBD but are not currently receiving treatment will also be included.
